

SANDIP RAMANUJ

LARAVEL DEVELOPER

Ghatlodiya, Ahmedabad. | 70411 44652 | ramanujsandip876@gmail.com

PROFESSIONAL SUMMARY

Laravel Developer with 1.5+ years of experience building and maintaining web applications using PHP, Laravel, and MySQL. Experienced in backend development, REST API development, and admin panel development, with hands-on experience integrating and customizing GPT-based features according to project requirements. Skilled in building scalable systems, implementing automation using cron jobs, and managing role-based access systems with multiple user hierarchies.

EXPERIENCE

Tilva Artsoft

October 2024 – November 2025

- Core Product: Piplana Pane

Upgraded the entire project from Laravel 10 to Laravel 11 including code refactoring and dependency updates.

Developed backend architecture including routes, controllers, models, and business logic. Improved APIs by fixing bugs, optimizing performance, and restructuring API responses. Implemented frontend updates using Tailwind CSS based on provided UI designs. Developed GST invoice automation system for monthly billing and email delivery.

- Admin Panel Development

Built admin panel modules including Business Groups and Agent management. Developed backend functionality for user management and system configuration. Implemented filters, search functionality, and pagination for better admin usability.

- Simply Shutters

Developed product import system using Excel for bulk product upload. Implemented pagination and lazy loading to improve performance when loading large product data.

- Vikash Pen World

Developed a complete cart-to-order workflow including product cart, checkout, and order placement, along with backend logic for order processing and order management. Also implemented a Contact Us form with CAPTCHA integration to prevent spam and ensure secure form submissions.

- Internal Application

Developed complete GST Invoice Module with CRUD operations and GST calculation logic. Implemented search filters, invoice generation, printing, and PDF download functionality. Improved database queries and backend performance for invoice processing.

- mytravelpa.ai

Worked on backend modules for a travel automation platform. Integrated GPT API to generate travel-related information dynamically. Implemented backend logic to fetch AI responses and store them in the database. Managed travel data including hotels, food places, travel destinations, and trip details. Developed modules to handle trip data creation, update, and automation workflows.

- The Loan Tracker

Working on a loan data management system integrated with third-party APIs such as Zapier.

Developed a multi-role system with Admin, Team Leader, and Team user levels. Implemented role-based access and permission management for different users. Developed editable status management using DataTables. Built modules for campaign templates and system settings. Implemented cron-based campaign assignment system which automatically assigns campaigns based on time and contact conditions. Maintained logic for multi-admin and hierarchical team structure across the application. Handled backend logic for managing loan data, campaign tracking, and user assignments.
